-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Claims 1-17 are presented for examination.
2. The claims and only the claims form the metes and bounds of the invention.
“Office personnel are to give claims their broadest reasonable interpretation in light of the supporting disclosure. In re Morris, 127 F.3d 1048, 1054-55, 44 USPQ2d 1023, 1027-28 (Fed. Cir. 1997). Limitations appearing in the specification but not recited in the claim are not read into the claim. In re Prater, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-551 (CCPA 1969)” (MPEP p 2100-8, c 2, I 45-48; p 2100-9, c 1, I 1-4). The Examiner has full latitude to interpret each claim in the broadest reasonable sense. The Examiner will reference prior art using terminology familiar to one of ordinary skill in the art. Such an approach is broad in concept and can be either explicit or implicit in meaning.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Johnson et al. (Pub. No. 2002/0041238 A1).

As to claims 1, 7 and 14, Johnson teaches the invention including a system and a method that facilitates communication between an industrial control device and a remote user device, comprising: an industrial control device that monitors information related to an industrial automation environment is taught as the remote monitoring system uses a bi-directional pager communication system for monitoring remote monitoring station wherein the remote station include control devices for altering the monitoring process or varying other operating parameters (see, abstract and figures 1-2 and page 2, paragraphs [0036] to [0041]); a processor that receives information from the industrial control device, determines whether a trigger condition exists, and selectively constructs and transmits at least one pager message to the remote user device if a trigger condition exists (see, abstract and figures 1-2 and page 2, paragraph [0036]).

As to claims 2, 8-9 and 15, Johnson teaches the system and the method wherein the processor receives programming information from the remote user device in response to the at least one pager message and constructs and transmits a programming message to the industrial control device (see, figures 1-4 and page 2, paragraph [0036] to [0038]).

As to claim 3, Johnson teaches the system and the method wherein the remote user device is at least one of a telephone, cellular telephone, a personal desktop assistant (PDA), a personal computer, a laptop computer, and a pager (see, abstract and figures 1-2 and page 1, paragraph [0023] to [0024] and page 3, paragraphs [0053] to [0054]).

As to claim 4, Johnson teaches the system and the method wherein the at least one pager message comprises at least one text string (see, abstract and page 3, paragraphs [0053] to [0060]).

As to claims 5, 11-13 and 16-17, Johnson teaches the system and the method wherein the industrial control device is a programmable logic controller (PLC) (see, abstract and figures 1-2 and page 2, paragraph [0036]).

As to claims 6 and 10, Johnson teaches the system and the method wherein the processor and the remote user device communicate via at least one of a Telocator Alphanumeric Paging protocol and an ASCII protocol (see, abstract and figures 1-2 and page 1, paragraph [0023] to [0024] and page 3, paragraphs [0053] to [0054]).

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
